PROFILE

Computer Science & Engineering undergraduate focusing on software development and backend engineering with Go (Golang) and C++. Hands-on experience developing RESTful APIs, relational database schemas with PostgreSQL, Redis caching, JWT-based authentication, and RBAC workflows. Strong foundation in Data Structures, Algorithms, and clean architecture, committed to writing reliable, maintainable, and high-performance server-side software.

SKILLS

Core Competencies: Problem Solving, Data Structures & Algorithms, REST API Development, Database Design, Authentication, RBAC, Clean Architecture, API Design, Debugging
Programming: C++, Go (Golang), Python, Dart, TypeScript, PHP, SQL
Backend: Golang, Gin Framework, REST APIs, JWT Authentication, RBAC, GORM, Refresh Tokens, Argon2id Hashing
Databases & Caching: PostgreSQL, MySQL, Redis
Frontend & Mobile: Next.js, TypeScript, Flutter, Dart, Android Development
Tools & Platforms: Docker, Git, GitHub, Postman, VS Code, Android Studio

PROJECTS

- CampusX — Multi-College Event Platform** *Go, Gin, PostgreSQL, Redis, JWT, Next.js, Docker*
- Architected a secure multi-tenant event platform utilizing a Go/Gin backend and Next.js/TypeScript frontend with strict tenant isolation across middleware and database access.
 - Designed and normalized 16 PostgreSQL tables with relational integrity constraints to manage multi-college registration, ticketing, admin dashboards, and payment lifecycles.
 - Implemented stateless JWT authentication, RBAC, Argon2id password hashing, refresh-token rotation, and Redis-backed rate limiting to guard protected endpoints.
 - Engineered a deterministic state-machine lifecycle handling event transitions (DRAFT → PUBLISHED → ONGOING → COMPLETED) and containerized client-server workloads using Docker.
- UrbanPulse — Location-Based Community Platform** *Go, Gin, PostgreSQL, GORM, JWT, Flutter, Google Maps API*
- Engineered backend RESTful APIs using Go and Gin for user authentication, profile workflows, and community management, structured on clean architecture principles.
 - Integrated GORM with PostgreSQL to execute validated queries and enforce data schemas for location-aware records and user profiles.
 - Built secure authentication flows featuring JWT tokens to safeguard protected endpoints across client-server communications.
 - Developed a cross-platform mobile client in Flutter featuring interactive Google Maps rendering, geolocation tracking, and responsive navigation components.

EXPERIENCE

- Rays IT & Design World** July 2026
Flutter Trainee Raipur, India
- Completed practical training in mobile application engineering using Flutter and Dart.
 - Built responsive UI components, integrated asynchronous REST APIs, and implemented structured state management flows.
 - Applied standard debugging workflows and clean architecture practices to solve software bugs and performance bottlenecks.
- Rays IT & Design World** July 2025
PHP Trainee Raipur, India
- Completed practical training in backend web development, server-side scripting fundamentals, and relational database interaction using PHP and SQL.
 - Engineered structured server-side routines, processed client requests, and performed programmatic database validations.
 - Strengthened foundational knowledge in structured programming, software debugging, and server runtime environments.

CERTIFICATIONS

- HackerRank** — REST API (Intermediate) (2025)
- HackerRank** — Problem Solving (Basic) (2025)
- Simplilearn** — Learn Advanced C++ Course Online (2024)

EDUCATION

Bhilai Institute of Technology (BIT), Raipur Expected Graduation: 2027
Bachelor of Technology (B.Tech) in Computer Science & Engineering Raipur, India
Chhattisgarh Swami Vivekanand Technical University (CSVТУ)
